

**LISTING OF CLAIMS:**

Claims 1-18 are cancelled and new claims 19-23 are added.

The following listing of claims will replace all prior versions and listings of claims in the application.

Claims 1-18 (canceled).

19. (new) A device comprising:

means for driving multiple lasers arranged in a two-dimensional array defining a plane;

means for modulating output of light from one of the multiple lasers,

means, located between the means for driving and the means for modulating, for electrically connecting the means for driving to the means for modulating while electrically bypassing the lasers;

the means for driving, means for electrically connecting and the means for modulating being integrated together as a stack.

20. (new) The device of claim 19 wherein the lasers are edge emitting-type lasers, the device further comprising:

means for redirecting light from one of the multiple edge emitting-type lasers in a direction substantially perpendicular to the plane.

21. (new) The device of claim 20 wherein the means for modulating lies in a plane parallel to the plane and is located for modulating the light exiting the means for redirecting.

22. (new) The device of claim 21 wherein the means for redirecting is located between the means for driving and the means for modulating.

23. (new) The device of claim 20 wherein the means for redirecting is located between the means for driving and the means for modulating.
